»» ПРЕИМУЩЕСТВА ПЫЛЬНИКОВ AVANTECH

- Для производства пыльников Авантек используется современный материал – неопрен.

Неопрен – водонепроницаемый, эластичный, мягкий материал, обладающий высокой прочностью и устойчивостью к воздействию смазочных материалов. Неопрен сохраняет свои характеристики в широком диапазоне температур от +90 °С до -50 °С. Пыльник из неопрена может растягиваться в несколько раз и принимать исходную форму без остаточных деформаций. Неопрен является одним из самых идеальных материалов для производства пыльников.

- Производство пыльников осуществляется в соответствии со всеми требованиями, которые предъявляются к оригинальным деталям.

- Адаптированы к российским условиям эксплуатации. Рассчитаны на агрессивное воздействие различных химических реагентов, которые применяются в зимнее время года для устранения снега и льда с дорожного полотна, и нефтепродуктов.

- Обеспечивают надежную защиту механизмов от механических повреждений.

- Пыльники Авантек производятся в Тайване. Тайвань является одной из ведущих стран по производству сырья для предприятий резино-технической промышленности, что связано с природными и климатическими особенностями данной страны.

Обращаем внимание, что с 2012 г. поменялась нумерация пыльников Авантек. Для удобства подбора пыльников в каталоге приводится как новый, так и предыдущий артикул.
